Marking Guide CPSC 441 - Assignment 3 Total Points = 100

Code that does not **compile** and **run** on CPSC Linux machines (e.g., linux.cs.ucalgary.ca) will automatically receive a mark of 0 regardless of the actual implementation and the amount of code submitted. The TAs are not able to evaluate program submissions that do not compile and run.

General features:

- 1. Sending segments, receiving ACKs and retransmissions are implemented in *parallel* using multi-threading.
- 2. TCP handshake is implemented correctly.
- 3. Window size is implemented correctly.
- 4. Sequence numbers are handled correctly.
- 5. Timer start and stop are implemented correctly.
- 6. Timer is started for the first segment in the window only.
- 7. Upon timeout, all pending segments are retransmitted.
- 8. Cumulative ACKs are processed correctly.
- 9. Segment creation and transmission is implemented correctly (e.g., all segments have the max payload except the last segment).
- 10. The last segment of the file is handled correctly.

Comments:

Requirements

Penalty	Description	Grade
-20	Program includes concepts or libraries that are not allowed	
-10	Submission instructions have not been followed	
-10	Program does not have proper code structure and comments	

Functionality: FastFtp Class (Total of 100)

Marks	Description	Grade			
File Transfer					
	Typical case				
	Use the following typical values for various parameters: • Loss = 0.10 • Delay = 10 • RTO = 50 • Window = 10				
60	Run the client and server on the same machine. Transfer a binary file of medium size about 100 Kbytes.				
	 Expected outcome: The client runs and transfer is completed quickly. The file is transferred correctly. There is no stalling or exceptions 				
	Special Cases: Change the value of the parameters mentioned. For others, use the default val	ues			
5	Effect of server host a. Client and server on the same host b. Client and server on different hosts				
5	Effect of file type a. Send a medium size text file b. Send a medium size binary file				
5	3. Effect of file length a. A small file of 1 segment b. A large file of > 1000 segments				

10	4. Effect of loss probability	
	a. Loss = 0.95, RTO = 10	
	✓ There should be a lot of retransmissions in this case.	
	b. Loss = 0, RTO = 1000	
	✓ There should be almost no retransmissions in this case.	
10	5. Effect of retransmission timeout (RTO)	
	a. RTO = 100, delay = 1, loss = 0	
	✓ There should be almost no retransmissions in this case.	
	b. RTO = 100, delay = 100, loss = 0	
	✓ There should be some retransmissions in this case.	
5	6. Effect of window size	
	a. Window = 1	
	✓ Slow file transfer	
	b. Window = 100	
	✓ Fast file transfer
